### UF-NFREC Case Study

Breeding season pregnancy rates:

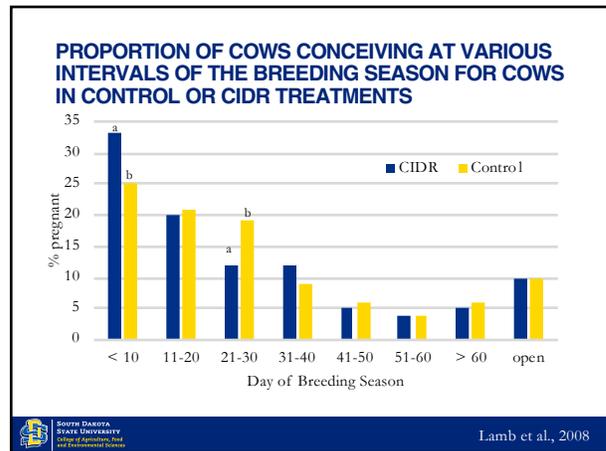

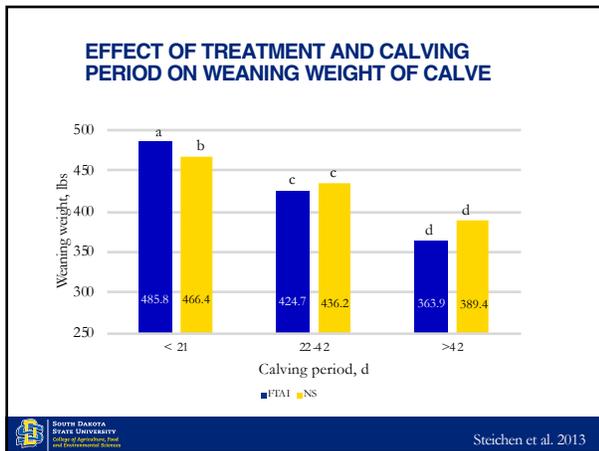

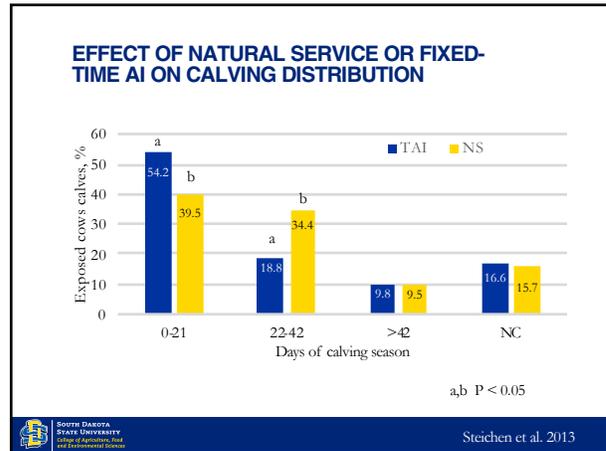

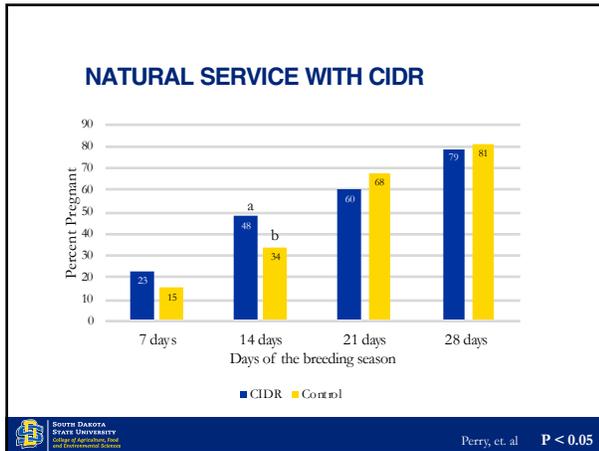

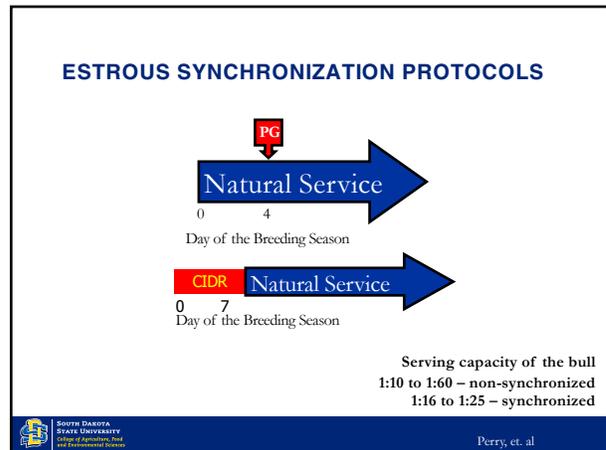

Year	2006	2007	2008	2009	2010	2011	2012	2013
PR	81%	86%	84%	86%	82%	94%	92%	93%
Mean calving day	79.2	80.9	59.2	56.2	53.7	47.2	39.5	38.7
BS length	120	120	110	88	80	75	70	72

### UF-NFREC Case Study

Change in calf value:

Year	2006	2007	2008	2009	2010	2011	2012	2013
Mean calving day	79.2	80.9	59.2	56.2	53.7	47.2	39.5	38.7
Difference from 2006/2007	0	0	21.7	24.7	27.2	33.7	41.4	42.2
Per calf increase in value	0	0	\$87	\$99	\$109	\$135	\$166	\$169
Herd increase in value	0	0	\$19,100	\$29,700	\$32,700	\$40,500	\$49,800	\$50,700

Lamb, personal communication

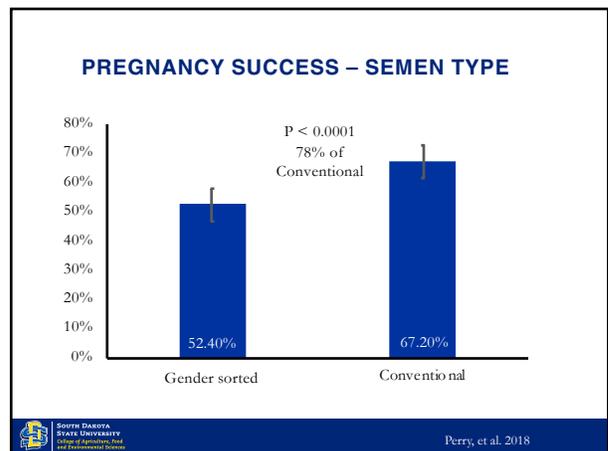

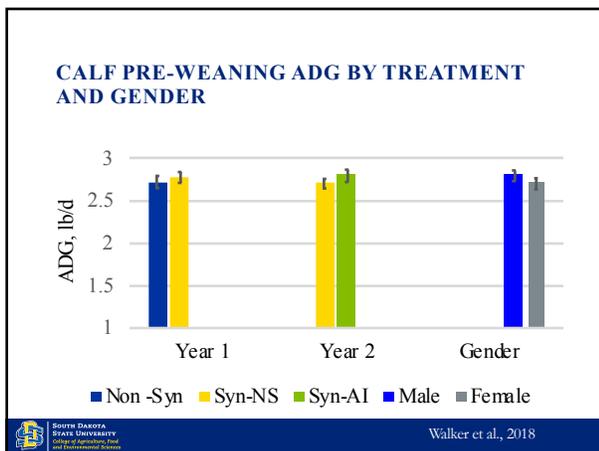

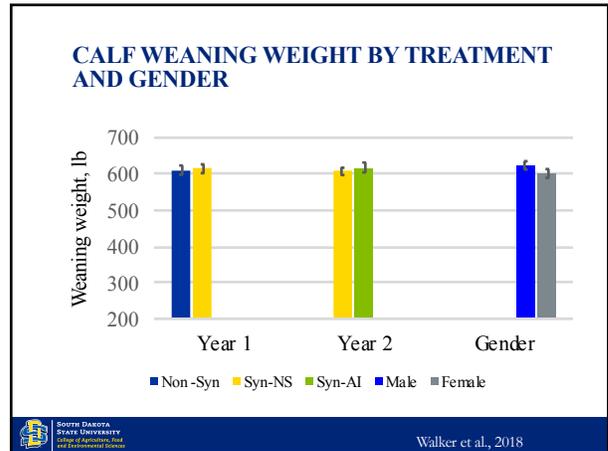

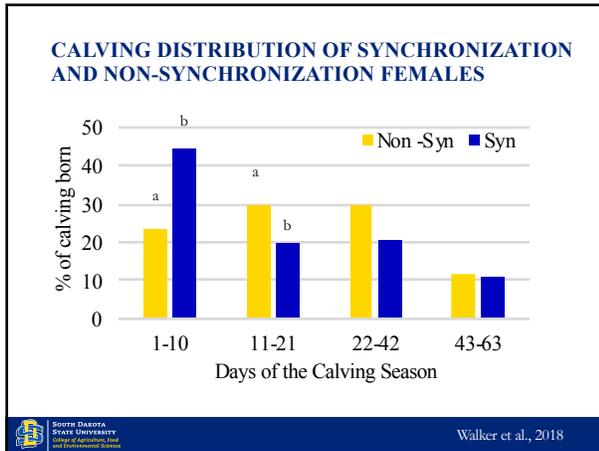

### POUNDS WEANED

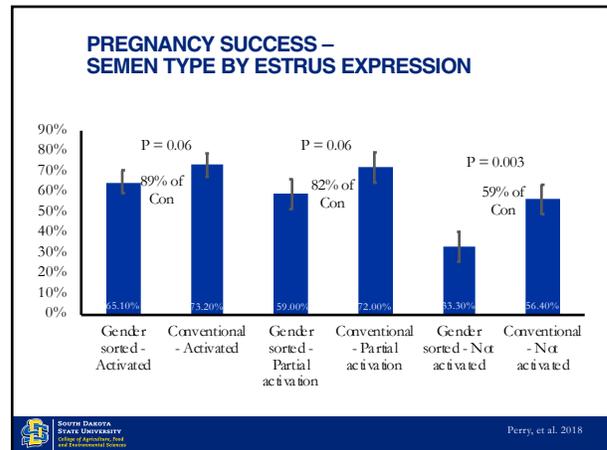

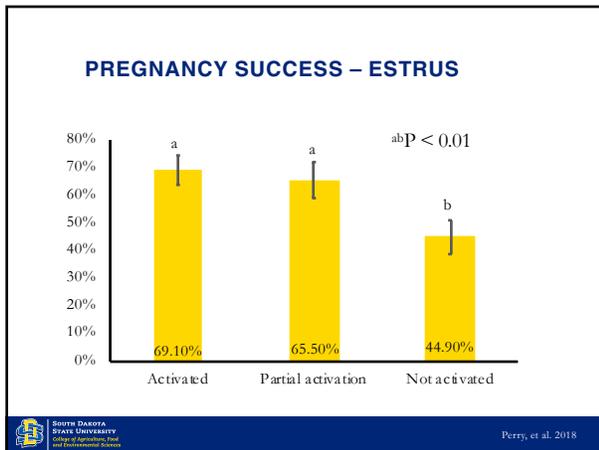

- The single largest factor that impacts weaning weight is pounds of calf weaned
- 2.42 pounds of calf weight is lost for each day after the start of the calving season
  - Based on 3,700 calves at US-MARC

### SDSU REPRODUCTIVE TECHNOLOGIES

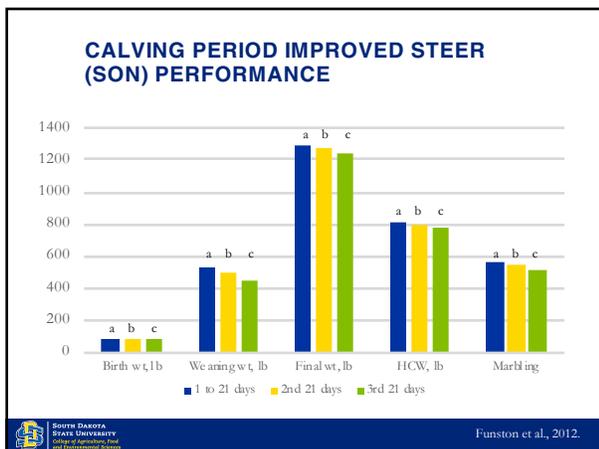

- Level 1
  - Non-synchronization – Natural Service
  - Synchronization – Natural Service
- Level 2
  - Synchronization – Natural Service
  - Synchronization – AI
- Level 3
  - Synchronization – AI
  - Synchronization – AI (Gender-sorted semen)
- Conducted at 10 locations

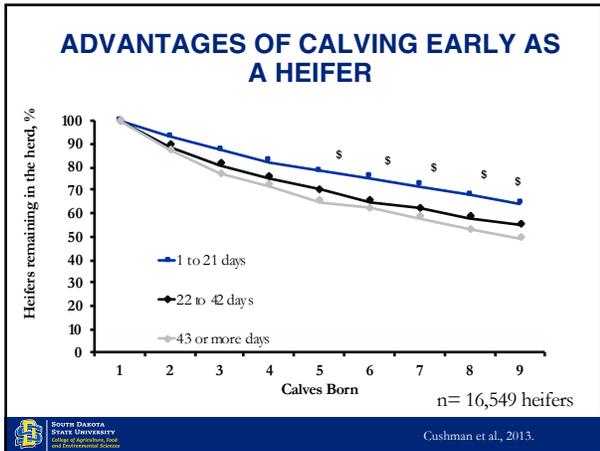

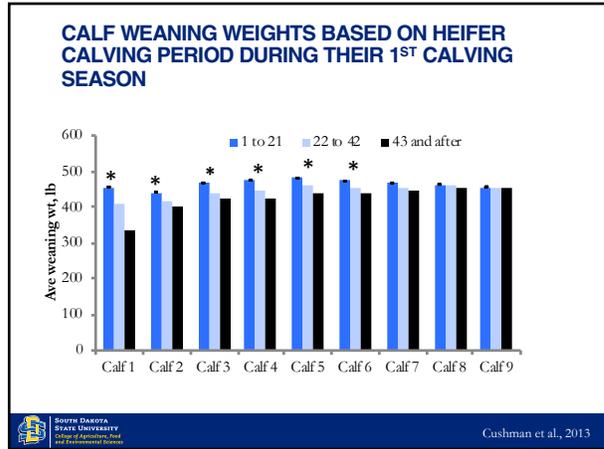

### INCREASE BEEF PRODUCTION

- March-born, composite Red Angus × Simmental steers (n = 771) were classified as being born in the first, second, or third 21-d period of the calving season within year.
- Steers were slaughtered at a commercial abattoir when 12th rib fat cover was visually assessed to be approximately 1.25 cm.

### CARCASS VALUE

	Calving Period 1	Calving Period 2	Calving Period 3
Carcass Value	0 (\$1,114)	-\$25 (\$1,089)	-\$74 (\$1,040)

- ### CONCLUSION
- Estrous synchronization with natural service or AI can allow for more calves being born early in the calving season
  - AI along with sire selection of genetically superior bulls increase the quality of the product
  - Using gender-sorted semen with females that are expressing estrus, will maximize conception rates and improve the skew of gender ratio
  - Early born calves has potential to increase feedlot performance
  - Heifers calving in the first 21 days has potential to improve longevity in the herds as well as pounds of weaned calves
